

The impact of the mitochondrial bottleneck on mtDNA disease risk and embryogenesis

Citation for published version (APA):

Otten, A. B. C. (2016). *The impact of the mitochondrial bottleneck on mtDNA disease risk and embryogenesis*. [Doctoral Thesis, Maastricht University]. Ipskamp.
<https://doi.org/10.26481/dis.20161115ao>

Document status and date:

Published: 01/01/2016

DOI:

[10.26481/dis.20161115ao](https://doi.org/10.26481/dis.20161115ao)

Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Propositions belonging to the thesis:

The impact of the mitochondrial bottleneck on mtDNA disease risk and embryogenesis – Studies in humans and zebrafish

1. Due to biological variation in the bottleneck, every woman has a risk to give birth to a child with a mitochondrial DNA disease (*this thesis*).
2. Positive selection is active during the segregation of mitochondria (*this thesis*).
3. Errors made by the mitochondrial polymerase *POLG* can explain the high *de novo* mitochondrial DNA mutation frequency (*this thesis*).
4. Mitochondrial DNA patients are victims of evolution (*this thesis*).
5. Scientists should learn from journalists how to communicate science, in order to win the public debate (*valorization*).
6. Mathematicians will take over biology.
7. Targeting mitochondrial metabolism is a new option for cancer therapy.
8. Nothing in biology makes sense except in the light of evolution (*T. Dobzhansky*).
9. In het leven van ieder mens komen ogenblikken voor waarop hij tot zichzelf zegt: "Tsja, dat kán niet." En dan dóet hij iets (*Erik Hazelhoff Roelfzema, Soldier of Orange*).
10. Truth like a cow: in the Netherlands, only fans of PSV can look upstairs in Europe (*translation inspired by Louis van Gaal*).

Stellingen behorende bij de thesis:

The impact of the mitochondrial bottleneck on mtDNA disease risk and embryogenesis – Studies in humans and zebrafish

1. Door biologische variatie in de bottleneck loopt elke vrouw het risico te bevallen van een kind met een mitochondriële DNA aandoening (*dit proefschrift*).
2. Er vindt positieve selectie plaats tijdens de segregatie van mitochondriën (*dit proefschrift*).
3. Fouten gemaakt door het mitochondriële polymerase *POLG* verklaren de hoge frequentie waarmee *de novo* mitochondriële DNA mutaties worden gevonden (*dit proefschrift*).
4. Patiënten met een mitochondriële DNA mutatie zijn slachtoffers van de evolutie (*dit proefschrift*).
5. Wetenschappers moeten van journalisten leren hoe wetenschap te communiceren om het publieke debat te winnen (*valorisatie*).
6. Wiskundigen zullen de biologie overnemen.
7. Het aanpassen van het mitochondriële metabolisme vormt een nieuwe mogelijkheid voor kankertherapie.
8. Nothing in biology makes sense except in the light of evolution (*T. Dobzhansky*).
9. In het leven van ieder mens komen ogenblikken voor waarop hij tot zichzelf zegt: "Tsja, dat kán niet." En dan dóet hij iets (*Erik Hazelhoff Roelfzema, Soldaat van Oranje*).
10. In Nederland houden alleen supporters van PSV aansluiting bij de Europese top.
